

how these contaminants would behave in the aquifer and surrounding environments. This supplement provides the information the NRC staff identified in its ADR as necessary. The supplement describes the affected environment with respect to the groundwater flow path for potential contaminant releases from the repository that could be transported beyond the postclosure regulatory compliance location through the alluvial aquifer in Fortymile Wash and the Amargosa Desert, and to the Furnace Creek and Middle Basin areas of Death Valley. The analysis in this supplement considers both radiological and nonradiological contaminants.

Using groundwater modeling, the NRC staff finds that contaminants from the repository would be captured by

groundwater withdrawal along the flow path, such as the current pumping in the Amargosa Farms area, or would continue to Death Valley if there is no or reduced pumping. Therefore, this supplement provides a description of the flow path from the postclosure regulatory compliance location to Death Valley, the locations of current groundwater withdrawal, and locations of potential natural discharge along the groundwater flow path. The supplement evaluates the potential radiological and nonradiological environmental impacts to groundwater and at surface discharge locations over a 1-million-year period following repository closure. The analysis considers the potential impacts on the aquifer environment, soils, ecology, public health, and the potential for disproportionate impacts on

minority and low-income populations. In addition, this supplement assesses the potential for cumulative impacts that may be associated with other past, present, or reasonably foreseeable future actions. The NRC staff finds that all of the impacts on the resources evaluated in this supplement would be SMALL.

The draft supplement notice of availability and public meetings was published in the **Federal Register** on August 21, 2015 (80 FR 50875). A notice of extension to the public comment period was published on September 18, 2015 (80 FR 56501).
